METHOD AND SYSTEM FOR PROVIDING ADVISORY INFORMATION TO A FIELD SERVICE PROVIDER

Abstract of the Invention

A network advisory system that provides advisory information to a field service provider is disclosed. The network advisory system receives collected data from one or more destination facilities and analyzes the information to generate advisory information. The advisory information is used by the field service provider to provide a service at the destination facility. The field service provider may receive the advisory information while in transit to the destination facility or while located at a destination facility. The field service provider receives the advisory information through a network connection. The network connection may be either a wireless connection or a land-based connection.
